

Colex International Limited

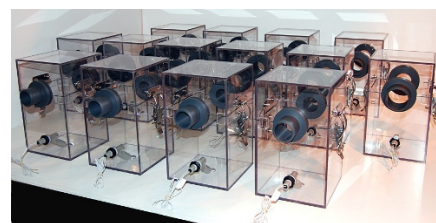

Manufacturer of flexible thermoplastic hose & tube

Colex can supply hose & tube in the following materials:
PVC, Nylon, Polyurethane, Polyethylene, Silicone, PTFE, FEP & DIN Spec Nylon.
Custom fabrication is also available.

Colex Protectaflex continues to strengthen its position as the “go to” solution for easy to install flexible dual containment hose. January has seen more orders from Northern Pumps, this time for poly-electrolyte dosing for Severn Trent Water.

Protectaflex is also being adopted by a major MEIC as their flexible containment solution for the future and will be specifying it for all forthcoming installations where flexible hoses are a necessity or an advantage.

Colex have also developed a new catch-pot solution to enable connection to other dual containment hoses and tubes, allowing users to update and expand existing systems without having to replace all existing hose lines. These bespoke solutions are all part of the Colex package.

These possibilities are another reason why Colex Protectaflex is the ideal solution for such an application, its ease of installation and reduced size and weight compared to traditional hose in hose dual containment systems make this a winner for everyone.
